

Job Description

JavaScript Web Developer

The Position

We are seeking a JavaScript Web Developer who is motivated to combine the art of design with the art of programming. Responsibilities will include creating web design solutions that have high visual impact. The role involves listening to briefs and understanding needs before making design decisions and writing code. You will work with both front-end and back-end developers to build necessary client-side logic. This opportunity is ideal for an experienced web designer who has a real creative eye for pixel perfect digital web design mixed with a good understanding of consumer engaged content.

We are looking for someone who is enthusiastic about collaborative working and sharing of ideas. We are a passionate, forward-thinking, innovative company where things are always happening. We're looking for people who work quickly, are competitive self-starters, smart and do what is needed.

Responsibilities

- Design bespoke website to implement our services.
- Build reusable code and libraries for future use.
- Provide secure functional, scalable applications.
- Ensure landing pages meet front-end coding standards and best practices.
- Ensure the technical feasibility of UI/UX designs.
- Optimise applications for maximum speed and scalability.
- Maintain the look and feel of the group's websites on a day-to-day basis.
- Uploading new information, changing creative/layout and implementing new features.
- Producing products that are user-friendly, effective and appealing.
- Assure that all user input is validated before submitting to back-end services.
- Collaborate with other team members and stakeholders.

Required skills

- Expertise in a mix of front-end and back-end technology.
- Strong understanding of JavaScript and the specific ways it works and workarounds for it.
- Good knowledge of HTML, CSS, web mark-up, version control, accessibility, implementing visual designs across multiple devices/browsers.

Job Description

- Experience in responsive design.
- Skills across web page layout, typography, colour schemes, style guides, ad banners and logo concepts, button sets etc.
- Solid knowledge of web application security.
- Good understanding and skills in JavaScript frameworks/libraries such as jQuery, Angular.JS.
- Good grasp of asynchronous request handling, partial page updates, and AJAX.
- Proficient understanding of cross-browser compatibility issues and work-arounds for such issues.
- Familiarity with JavaScript module loaders, such as Require.js and AMD.
- Understanding of front-end build tools, such as Grunt and Gulp.js.
- Good grasp of browser rendering behaviour and performance.
- All applicants must have the right to work in the UK without restrictions.
- Must be a self-starter with a strong attention to detail.
