

# Oracle ODBC Driver

Our Oracle ODBC Drivers are lightweight client or server-side Drivers that are simple to install and allow easy access to your Oracle data from ODBC enabled applications or databases.

Developed from the ground up we have two versions available:

Our **Oracle Client Version** – this is our Oracle Call Interface (OCI) Driver and needs the Oracle client software (either the Instant Client or standard Oracle Database Client) to be installed.

Our **Clientless Version** – aka “The Wire Protocol (WP) Driver” does not require any Oracle client software to be installed, because, unlike the OCI Driver, it accesses Oracle directly.

## Easysoft Recommends the Oracle Client Version

Using the Oracle Client version provides many additional benefits to organisations - Oracle Advanced Security, Real Application Clusters (which is a high availability feature), Transparent Application Failover, OCI performance tuning mechanisms etc.

So when performance matters we will always recommend that clients use the OCI version of our Oracle Driver.

But if you want to minimise the software footprint on your client machines or the Oracle Client just isn't available to you then we do also provide a Wire Protocol version of the Driver.

## Our Oracle Support

We have been supporting the Oracle platform since 1997, so it will come as no surprise that our Oracle ODBC Driver supports ALL versions from Oracle 8 to the very latest release; this will ensure that no matter what release of Oracle RDBMS your enterprise is using, we will support it.
